

I live in the Rocky Mountain Front Range and we have limited radio coverage in the mountain canyons. XM Radio covers the mountains very well. The NAB's petition 04-160 is their attempt to keep satellite radio from providing expanded services like local weather and traffic reports. Allowing XM Radio to deliver local weather and traffic will allow them to provide a fuller service that can also include "Amber Alerts" and other important announcements like the Emergency Broadcast System alerts. Please do not allow the NAB to restrict the services that XM can provide, XM is not interfering with the frequency allotment for the local broadcasters and shouldn't be restricted with their content.
